

TWO-WEEK INTERNSHIP PROJECT

Internship Management and Task Tracking System

Duration	2 weeks	Backend	Spring Boot (mandatory)
Start Date	Monday, 27 July 2026	Project Period	27 July–9 August 2026
Submission Deadline	10 August 2026 at 10:00 AM	Review Method	Individual website demonstration

1. Project Objective

Develop a complete, functional web application that supports the day-to-day management of internship students. The system must allow administrators or supervisors to manage interns, create projects and tasks, monitor progress, review submissions, and provide feedback. Interns must be able to view assigned work, update progress, and submit daily work logs.

Final outcome: Each intern must present a fully working website—not only UI screens or isolated APIs. The frontend, Spring Boot backend, and database must be integrated and demonstrated together.

2. Required Technology Stack

Layer	Requirement	Notes
Backend	Java 17/21 and Spring Boot	Mandatory. Use Spring Web, Spring Data JPA, validation, and Spring Security.
Frontend	Intern’s preferred technology	React is recommended. Angular, Vue, or Thymeleaf may also be used.
Database	mongodb	Create proper relationships, constraints, and sample data.
Version Control	Git and GitHub	Use meaningful commits throughout the two weeks.

3. User Roles

Administrator / Supervisor

- Manage intern accounts and profiles.
- Create projects, assign tasks, set priorities, and define deadlines.
- Review daily work logs and task submissions.
- Approve completed work, request revisions, and provide feedback.
- View dashboard summaries and progress reports.

Intern

- Log in securely and view their profile.
- View assigned projects, tasks, priorities, and deadlines.
- Update task status and progress.
- Submit repository links, document links, or completion notes.
- Submit daily work logs and view supervisor feedback.

4. Mandatory Website Features

Authentication and authorization: Login, logout, encrypted passwords, JWT or session authentication, and role-based access.

Intern management: Create, view, edit, search, filter, activate, or deactivate intern profiles.

Project management: Create and edit projects; record description, technology, deadline, status, and assigned interns.

Task management: Create, assign, edit, filter, and track tasks using TODO, IN PROGRESS, SUBMITTED, REVISION REQUIRED, and COMPLETED statuses.

Daily work logs: Interns record completed work, current work, challenges, hours worked, and next-day plans.

Submission and feedback: Interns submit work links or notes; supervisors approve, comment, or request revisions.

Dashboard: Show active interns, active projects, pending tasks, completed tasks, overdue tasks, and recent activity.

Quality controls: Form validation, clear error messages, global exception handling, responsive UI, loading states, and confirmation messages.

5. Additional Features (Only If Core Work Is Complete)

- Attendance and leave-request management.
- Email or in-app notifications.
- File uploading and download support.
- Performance evaluation with scoring.
- CSV or PDF report export.
- Charts, dark mode, forgot-password flow, or deployment automation.

6. GitHub Repository Requirements

- Use one repository containing both backend and frontend folders, unless there is a clear reason to use separate repositories.
- Do not upload only a ZIP file; the repository must show development history.
- Use meaningful commit messages and commit regularly.
- Do not commit passwords, database credentials, API keys, or .env files.
- Include .gitignore files and provide .env.example or application configuration examples.
- The final main branch must run according to the README instructions.

7. Submission Instructions

Create one submission folder using your full name and intern ID. Upload a short submission document or text file containing all required links to the Google Drive location provided by the supervisor.

Required item	Link / information to submit
Student details	name, email address
GitHub repository	Complete repository URL
Working website	clear local-run instructions
Documentation	GitHub link with a doc

Google Drive submission link: <https://drive.google.com/drive/folders/1Yoacr0o5W-NJBzcpSZnErhTBWriTHyjV?usp=sharing>

Submission deadline: Monday, 10 August 2026 at 10:00 AM

8. Final Review After the Submission Deadline

After the submission deadline on Monday, 10 August 2026 at 10:00 AM, every intern's website will be reviewed individually, one by one. Each intern must run the system and demonstrate the complete workflow from the frontend to the Spring Boot backend and database. The review will not be based only on screenshots, slides, or code explanation.

- Login and role-based access.
- At least one complete workflow: create an intern, create a project, assign a task, update progress, submit work, and provide supervisor feedback.
- Frontend and backend integration, validation, and error handling.
- Database design and stored records.
- Code structure, naming, security practices, and Git commit history.
- README accuracy and ability to run the project.

11. Evaluation Criteria

Criterion	Weight	What Will Be Checked
Functional completeness	30%	Mandatory features work correctly from UI to database.
Spring Boot backend	20%	REST design, security, validation, exception handling, and code structure.
Frontend and usability	15%	Responsive layout, navigation, feedback, and form usability.
Database design	10%	Relationships, constraints, consistency, and sample data.
Testing and documentation	10%	Tests, Swagger, Postman, README, and diagrams.
Git and code quality	10%	Commit history, organization, naming, maintainability, and no exposed secrets.

Criterion	Weight	What Will Be Checked
Demonstration	5%	Clear individual presentation of the working system.

12. Important Rules

- This is an individual assignment unless the supervisor provides different instructions.
- Spring Boot is mandatory for the backend. Submitting only a frontend website is not accepted.
- Copied projects, identical repositories, or work that the intern cannot explain may be rejected.
- Core features must be completed before optional features are attempted.
- Inform the supervisor early if a technical blocker prevents progress.

Acceptance condition: A submission is considered complete only when the website runs, the frontend communicates with the Spring Boot APIs, records are stored in the database, and the repository contains sufficient setup documentation.
