Assignment

1. Introduction

TrackIt is a full-stack web-based Internship Management and Task Tracking System developed to support the day-to-day management of internship students. The system provides a centralized platform where administrators and supervisors can manage interns, projects, tasks, work progress, daily work logs, submissions, and feedback.

The system also provides interns with a dedicated environment to view assigned work, monitor deadlines and priorities, update task progress, maintain daily work logs, submit completed work, and receive feedback from supervisors.

2. Project Objective

The main objective of TrackIt is to develop a complete and functional web application that simplifies the management and monitoring of internship students.

The specific objectives are to:

- Provide secure access based on user roles.
- Allow administrators and supervisors to manage intern accounts.

- Support project creation and intern assignment.
- Support task creation, assignment, priority setting, deadlines, and progress monitoring.
- Allow interns to maintain daily work logs.
- Allow interns to submit completed work.
- Allow supervisors to review submissions and provide feedback.
- Provide dashboard information for monitoring internship activities.

3. Technology Stack

Category	Technology
Frontend	React.js
Build Tool	Vite
Programming Language – Frontend	JavaScript
Routing	React Router DOM
HTTP Client	Axios
Backend	Spring Boot
Programming Language – Backend	Java 21
Web Framework	Spring Web
Security	Spring Security
Authentication	JWT

Password Security	BCrypt
Validation	Spring Validation
Database Integration	Spring Data MongoDB
Database	MongoDB Atlas
API Architecture	REST API
Backend Build Tool	Maven
API Testing	Postman
IDE	Visual Studio Code
Version Control	Git
Repository Hosting	GitHub
